## **APM Terminals Inland Services, South Asia, introduces 'Mobile Reefer Warehousing' services in Mumbai**

- **Service introduced to provide value to customers dealing in cargo requiring sustained cooling conditions**
- **Enables multi-commodity storage for short term and long term usage**

**Mumbai, India:** APM Terminals Inland Services, South Asia in line with its customer centric approach to business, inaugurated its first ever 'Mobile Reefer Warehousing' service at their Container Freight Station in Nhava Sheva, Mumbai.

Mobile Reefer Warehouses enable the storage of specialized and multi-commodity cargo requiring sustained cooling conditions which are exported or imported in refrigerated containers. These include products like food items, pathology goods, pharmaceutical products and confectionaries etc. The concept offers the advantage of proximity to Port in addition to the specialized services, thereby enabling the customers to save costs, time and enhance operational efficiencies. With the mobility factor, the service ensures the benefits of cold storage are available close to the point of requirement, thereby addressing the non-availability of cold storage warehouses in the vicinity or providing cost effective alternatives.

"Mobile Reefer Warehousing service is a result of the continued commitment at APM Terminals Inland Services, South Asia to partner our customers in their growth story through creation of value-based services. This concept will open up a whole new segment of service offerings, aimed at specialized storage facilities in the Container Freight Station for
